

Your application for faster and more efficient legal case management

ParagraphPro is specially designed for authorities, law firms and other organizations that are working with legal and contentious cases. Information that used to take hours or days to locate, cross relate and compile is now just a click away. Facts around legal cases can be found quickly and simple on your conditions

Some examples of functionality in ParagraphPro

- **Journal Notes/Diary** Full support for a complete Journal/Diary per legal case. Unlimited number of events can be added to a specific case.
- **Document Management** The word processor application Microsoft Word works as an integrated part of ParagraphPro. Documents can be attached, edited and saved as part of a new or existing Journal Note. Bookmarks can be added as a part of a word template that ultimately can receive information from a particular legal case in ParagraphPro. Examples of bookmarks are: Case/Registration number, client information, official, administrator information etc.
- **Surveillance Functionality** Supports preferable number of surveillance dates for a specific legal case. These dates can be supervised and managed through both search functions and detailed reporting.
- **Advanced Query functions/Selection** A query function where the constructs a personal query to retrieve information from several sources. The Query result is presented in a list that can be exported to Microsoft Excel for further work, through just a simple click on your menu bar. The query can be edited and saved for later use. From the query result one can also create a source document, which can be used to print address labels in Microsoft Word. From the query result one can also directly open a specific legal case or Journal item.
- **Possibilities for Integration** ParagraphPro contain possibilities to extend the functionality towards other Microsoft Office products, Scanning, financial systems, billing systems or time accounting systems. Customization has already taken place regarding support for electronically timesheets serving as input for larger financial applications.
- **Keywords/Search Word** Full support to create a repository of keywords/search words that can be attach to a specific case. This dramatically increases the traceability of all legal cases and their activities.
- **Customization** The user can customize the user interface all by him/herself for specific preferences. This applies to text descriptions and the ability to hide input fields on the form.
- **Reporting** Full support for a number of predefined reports with print output to Microsoft Word, which enables functionality like export to email and other Microsoft Office products.
- **Domain Specialists** Full support to create a register containing domain specialists which can be attached and cross related to a specific case or activity.
- **General Address information** Full support to create a register containing address information, email, phone numbers etc. This does not need to be directly associated with a specific legal case. An example of this is for instance address information about various courts.
- **Address and email register in Microsoft Word** The ParagraphPro database has full support to supply Microsoft Word with address information and paste it into a document. In addition to that there is also functionality to supply email addresses and send the document attached to a email.

Examples of customizations

- **Trainee Course Database** Full support to store various courses with course materials constructed in Microsoft Word and Microsoft PowerPoint.
- **Verdict Register** Separate register to store and search verdicts.

Customer views regarding ParagraphPro?

"Everybody have access to earlier cases, which increases knowledge and efficiency"

"All our users are constantly using the application. In the application we have functionality for legal cases, Word processing, email and connections to our billing system. Finalized cases did historically end up in the bookshelf, anonyms for many other associates. These days everybody has access to old cases, which gives knowledge and efficiency starting new initiatives. We no longer have to look in old files or binders or spend valuable time locating the right background information. In addition to this we can step in and take over cases between each other, which is very smooth. We are very satisfied with ParagraphPro."
Ingaliil Brandt
IT – Director LO-TCO Rättsskydd

"ParagraphPro is well tailored for our business needs"

"The biggest advantage with ParagraphPro is that it helps us to more efficiently carry out our work. We are a small government organization, which have demands, to fast and efficient, and correctly being able to respond to public and media requests. ParagraphPro enables us with faster and easier access to information in Legal Cases compared to how we used to work and can ultimately conduct better external services. We spend a lot of time previously locating acts and binders. Nowadays most things are available just a "click away". The other big advantage is that the application is tailored to our legal business needs. Besides this the good news is that ParagraphPro can be developed further as our business requirements are changing."
